Definition P.1.1

In geology, a **phase** is any physically separable material in the system, such as various minerals or liquids.

A **component** is a chemical compound necessary to make up the phases; for historical reasons thise are usually oxides such as Calcium Oxide (CaO) or Silicone Dioxide (SiO_2).

In a typical problem, a geologist knows how to build each phase from the components, and is interested in determining reactions among the different phases.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.1.2 *(∼5 min)*

Consider the 3 components $\mathbf{c}_1 = \mathrm{CaO}$, $\mathbf{c}_2 = \mathrm{MgO}$, and $\mathbf{c}_3 = \mathrm{SiO}_2$, and the 5 phases

$$\mathbf{p}_1 = \mathrm{Ca}_3\mathrm{MgSi}_2\mathrm{O}_8 \qquad \mathbf{p}_2 = \mathrm{CaMgSiO}_4 \qquad \mathbf{p}_3 = \mathrm{CaSiO}_3$$
$$\mathbf{p}_4 = \mathrm{CaMgSi}_2\mathrm{O}_6 \qquad \mathbf{p}_5 = \mathrm{Ca}_2\mathrm{MgSi}_2\mathrm{O}_7$$

Geologists will know

$$\mathbf{p}_1 = 3\mathbf{c}_1 + \mathbf{c}_2 + 2\mathbf{c}_3 \qquad \mathbf{p}_2 = \mathbf{c}_1 + \mathbf{c}_2 + \mathbf{c}_3 \qquad \mathbf{p}_3 = \mathbf{c}_1 + 0\mathbf{c}_2 + \mathbf{c}_3$$
$$\mathbf{p}_4 = \mathbf{c}_1 + \mathbf{c}_2 + 2\mathbf{c}_3 \qquad \mathbf{p}_5 = 2\mathbf{c}_1 + \mathbf{c}_2 + 2\mathbf{c}_3$$

or more compactly,

$$\mathbf{p}_1 = \begin{bmatrix} 3 \\ 1 \\ 2 \end{bmatrix}, \mathbf{p}_2 = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \mathbf{p}_3 = \begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}, \mathbf{p}_4 = \begin{bmatrix} 1 \\ 1 \\ 2 \end{bmatrix}, \mathbf{p}_5 = \begin{bmatrix} 2 \\ 1 \\ 2 \end{bmatrix}.$$

Determine if the 5 phases are linearly dependent or linearly independent.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.1.3 (~15 min)

Recall our five phases:

$$\mathbf{p}_1 = 3\mathbf{c}_1 + \mathbf{c}_2 + 2\mathbf{c}_3 \qquad \mathbf{p}_2 = \mathbf{c}_1 + \mathbf{c}_2 + \mathbf{c}_3 \qquad \mathbf{p}_3 = \mathbf{c}_1 + 0\mathbf{c}_2 + \mathbf{c}_3$$

$$\mathbf{p}_4 = \mathbf{c}_1 + \mathbf{c}_2 + 2\mathbf{c}_3 \qquad \mathbf{p}_5 = 2\mathbf{c}_1 + \mathbf{c}_2 + 2\mathbf{c}_3$$

or more compactly,

$$\mathbf{p}_1 = \begin{bmatrix} 3 \\ 1 \\ 2 \end{bmatrix}, \mathbf{p}_2 = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}, \mathbf{p}_3 = \begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}, \mathbf{p}_4 = \begin{bmatrix} 1 \\ 1 \\ 2 \end{bmatrix}, \mathbf{p}_5 = \begin{bmatrix} 2 \\ 1 \\ 2 \end{bmatrix}.$$

Geologists want to find chemical reactions among the 5 phases; that is, they want to find numbers x_1, x_2, x_3, x_4, x_5 such that

$$x_1\mathbf{p}_1 + x_2\mathbf{p}_2 + x_3\mathbf{p_3} + x_4\mathbf{p}_4 + x_5\mathbf{p}_5 = 0.$$

Activity P.2.1 *(∼10 min)*
A \$700,000,000,000 Problem:
In the picture below, each circle represents a webpage, and each arrow represents a link from one page to another.
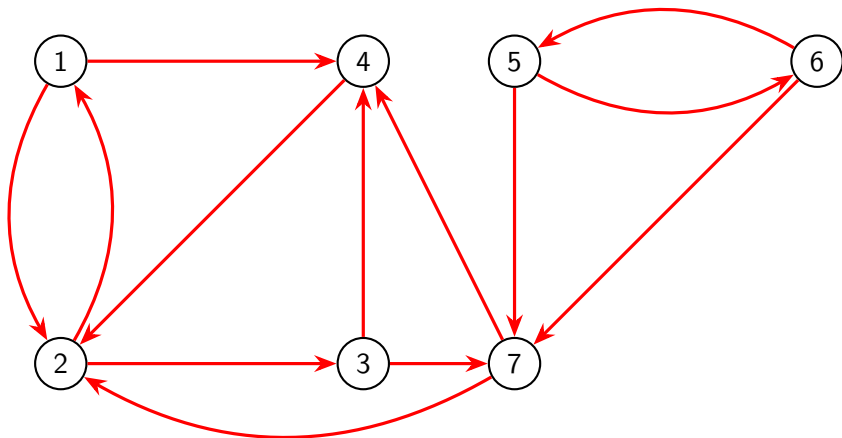

Based on how these pages link to each other, write a list of the 7 webpages in order from most imporant to least important.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Observation P.2.2
The $700,000,000,000 Idea:
Links are endorsements.

1. A webpage is important if it is linked to (endorsed) by important pages.

2. A webpage distributes its importance equally among all the pages it links to (endorses).

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Example P.2.3

Consider this small network with only three pages. Let x_1, x_2, x_3 be the importance of the three pages respectively.
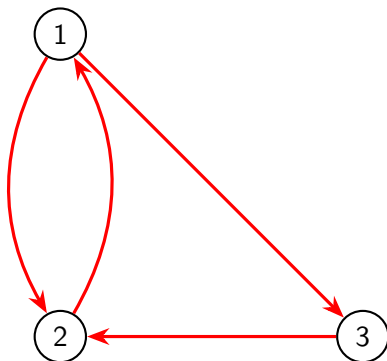

1. x_1 splits its endorsement in half between x_2 and x_3

2. x_2 sends all of its endorsement to x_1

3. x_3 sends all of its endorsement to x_2.

This corresponds to the **page rank system**

$$x_2 = x_1$$
$$\frac{1}{2}x_1 + x_3 = x_2$$
$$\frac{1}{2}x_1 = x_3$$

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Example P.2.4
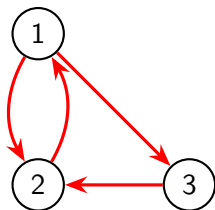

$$x_2 = x_1$$

$$\frac{1}{2}x_1 + x_3 = x_2$$

$$\frac{1}{2}x_1 = x_3$$

We can summarize the left hand side of the system by putting its coefficients into a

page rank matrix $A = \begin{bmatrix} 0 & 1 & 0 \\ \frac{1}{2} & 0 & 1 \\ \frac{1}{2} & 0 & 0 \end{bmatrix}$, and store the right hand side of the system as

the vector $\mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}$.

Thus, computing the imporance of pages on a network is equivalent to solving the
matrix equation $A\mathbf{x} = \mathbf{x}$.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.2.5 *(~5 min)*

A **page rank vector** for a page rank matrix A is a vector $\mathbf{x}$ satisfying $A\mathbf{x} = \mathbf{x}$. This vector describes the relative importance of webpages on the network described by A.

Thus, the \$700,000,000,000 problem is what kind of problem?

(a) A bijection problem

(b) A calculus problem

(c) A determinant problem

(d) An eigenvector problem

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.2.6 *(~10 min)*

Find a page rank vector $\mathbf{x}$ satisfying $A\mathbf{x} = \mathbf{x}$ (an eigenvector associated to the eigenvalue 1) for the following network's page rank matrix A.

$$A = \begin{bmatrix} 0 & 1 & 0 \\ \frac{1}{2} & 0 & 1 \\ \frac{1}{2} & 0 & 0 \end{bmatrix}$$

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3
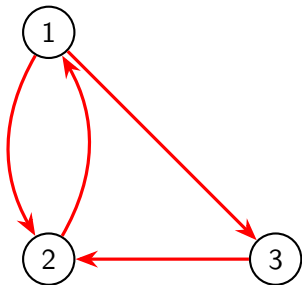

Observation P.2.7

Row-reducing $A - I = \begin{bmatrix} -1 & 1 & 0 \\ \frac{1}{2} & -1 & 1 \\ \frac{1}{2} & 0 & -1 \end{bmatrix} \sim \begin{bmatrix} 1 & 0 & -2 \\ 0 & 1 & -2 \\ 0 & 0 & 0 \end{bmatrix}$ yields the basic

eigenvector $\begin{bmatrix} 2 \\ 2 \\ 1 \end{bmatrix}$.

Therefore, we may conclude that pages 1 and 2 are equally important, and both pages are twice as important as page 3.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3
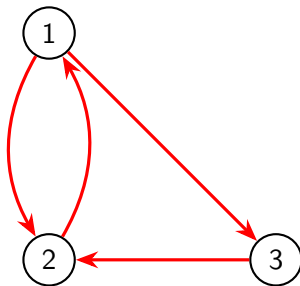

Activity P.2.8 *(∼10 min)*

Compute the 7×7 page rank matrix for the following network.
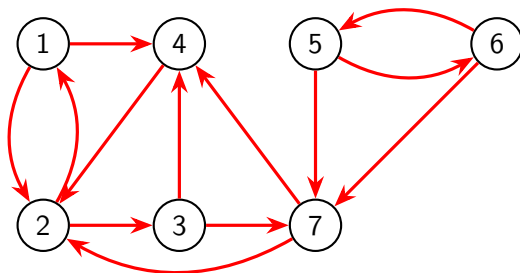

For example, since website 1 distributes its endorsement equally between 2 and 4,

the first column is $\begin{bmatrix} 0 \\ \frac{1}{2} \\ 0 \\ \frac{1}{2} \\ 0 \\ 0 \\ 0 \end{bmatrix}$.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.2.9 *(∼10 min)*
Find a page rank vector for the given page rank matrix.
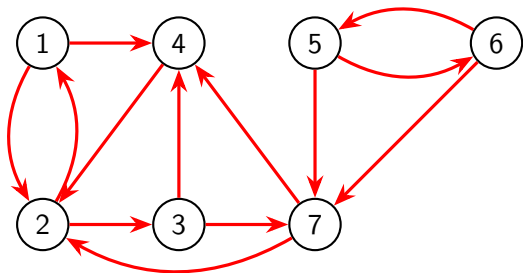

$$A = \begin{bmatrix} 0 & \frac{1}{2} & 0 & 0 & 0 & 0 & 0 \\ \frac{1}{2} & 0 & 0 & 1 & 0 & 0 & \frac{1}{2} \\ 0 & \frac{1}{2} & 0 & 0 & 0 & 0 & 0 \\ \frac{1}{2} & 0 & \frac{1}{2} & 0 & 0 & 0 & \frac{1}{2} \\ 0 & 0 & 0 & 0 & 0 & \frac{1}{2} & 0 \\ 0 & 0 & 0 & 0 & \frac{1}{2} & 0 & 0 \\ 0 & 0 & \frac{1}{2} & 0 & \frac{1}{2} & \frac{1}{2} & 0 \end{bmatrix}$$

Which webpage is most important?

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Observation P.2.10

Since a page rank vector for the network is given by **x**, it's reasonable to consider page 2 as the most important page.
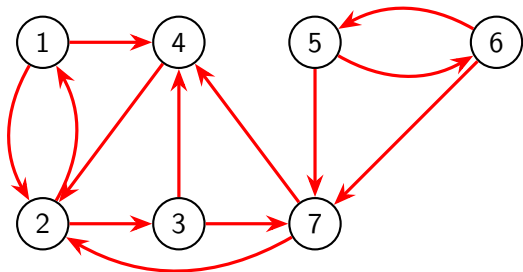

$$\mathbf{x} = \begin{bmatrix} 2 \\ 4 \\ 2 \\ 2.5 \\ 0 \\ 0 \\ 1 \end{bmatrix}$$

Module P
Section P.1
Section P.2
Section P.3

Observation P.3.1

Consider the truss pictured below with two fixed anchor points and a 10000 N load (assume all triangles are equilateral).

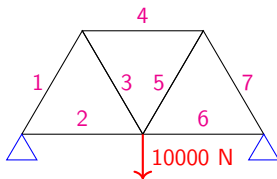

The horizontal and vertical forces must balance at each node. For example, at the bottom left node there are 3 forces acting.

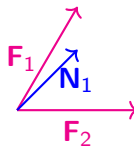

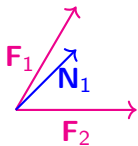

We adhere to the convention that a compression force on a strut is positive, while a negative force represents tension.

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Observation P.3.2

We decompose the first node into vertical and horizontal forces:

$$\mathbf{F}_1 = F_1 \begin{bmatrix} \cos(60^\circ) \\ \sin(60^\circ) \end{bmatrix}$$

$$\mathbf{N}_1 = \begin{bmatrix} N_{1,h} \\ N_{1,v} \end{bmatrix}$$

$$F_1 \sin(60^\circ) + N_{1,v} = 0$$
$$F_1 \cos(60^\circ) + N_{1,h} + F_2 = 0$$

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.3.3 *(∼10 min)*

Consider the truss pictured below with two fixed anchor points and a 10000 N load (assume all triangles are equilateral).

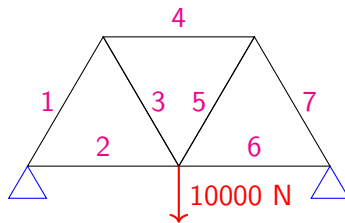

From the bottom left node we obtained 2 equations in the four variables

- F_1 (compression force on strut one)

- $N_{1,v}$ and $N_{1,h}$ (horizontal and vertical components of the normal force from the left anchor)

- F_2 (compression force on strut 2).

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.3.3 *(∼10 min)*

Consider the truss pictured below with two fixed anchor points and a 10000 N load (assume all triangles are equilateral).

From the bottom left node we obtained 2 equations in the four variables

- F_1 (compression force on strut one)

- $N_{1,v}$ and $N_{1,h}$ (horizontal and vertical components of the normal force from the left anchor)

- F_2 (compression force on strut 2).

Part 1: Determine how many total equations there will be after accounting for all of the nodes, and and list all of the variables. You do not need to actually determine all of the equations.
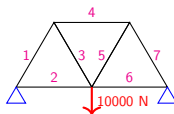

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Activity P.3.4 *($\sim$10 min)*

The resulting system is

$$
\begin{aligned}
N_{1,v} + (\sin(60^\circ))F_1 &= 0 \\
N_{1,h} + (\cos(60^\circ))F_1 + F_2 &= 0 \\
-(\sin(60^\circ))F_1 - (\sin(60^\circ))F_3 &= 0 \\
-(\cos(60^\circ))F_1 + (\cos(60^\circ))F_3 + F_4 &= 0 \\
(\sin(60^\circ))F_3 + (\sin(60^\circ))F_5 &= 10000 \\
-F_2 - (\cos(60^\circ))F_3 + (\cos(60^\circ))F_5 + F_6 &= 0 \\
-(\sin(60^\circ))F_5 - (\sin(60^\circ))F_7 &= 0 \\
-F_4 - (\cos(60^\circ))F_5 + (\cos(60^\circ))F_7 &= 0 \\
N_{2,v} + (\sin(60^\circ))F_7 &= 0 \\
N_{2,h} - F_6 - (\cos(60^\circ))F_7 &= 0
\end{aligned}
$$

Solve this system to determine which struts are compressed and which are in tension.
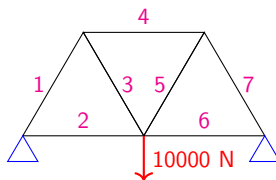

Module P

Math 237

Module P
Section P.1
Section P.2
Section P.3

Observation P.3.5

The determined part of the solution is

$$N_{1,v} = N_{2,v} = 5000$$
$$F_1 = F_4 = F_7 = -5882.4$$
$$F_3 = F_5 = 5882.4$$

So struts 1,4,7 are in tension, while struts 3 and 5 are compressed.
The forces on struts 2 and 6 (and the horizontal normal forces) are not strictly
determined in this setting.
